The VisiGuard Face Shield is one of the most important instruments in personal protection equipment. The features of the face shield make it a practical and economical solution.

## Benefits of the VisiGuard® Face Shield 2.0 with ZipStrap®

- Revolutionary patent pending design allows the shield and strap to be used without foam or fabric that may harbor contaminants and allows for repeated sterilization.
  - Product has been evaluated to be compatible with common cleaning/sterilization chemicals including 70% Ethanol, 70% Isopropyl Alcohol, 3% Hydrogen Peroxide, 6% Bleach cleaning solutions and Lysol among others.
    - Other shields require an anti-fog coating to dissipate condensation. This coating is removed if disinfected with typical cleaning chemicals.
  - VisiGuard® shield and ZipStrap® can also be sterilized using EtO, Gamma irradiation, Electron Beam or UV-C.
  - 100% Latex free.
  - Provides 59% more facial coverage vs. almost all commonly used medical face shields in the market today (172 square inches vs. 108) while still allowing for full-range of movement.
  - Approved for in-hospital use by major hospital system's independent Infectious Disease Control Department.
- Design is ANSI Z87.1 D3 approved for splash and droplet protection, as well as clarity, facial coverage and impact protection.
- FDA Approved in the fight against Covid-19 per EUA 4132020 MODEL#12157
- Made from FDA Approved PET material
  - The shield and ZipStrap® are 100% recyclable.
  - PET is the most commonly recycled plastic in the world.
  - This is not the case with other shields made from other plastics or that have attachments that must be removed before shield can be recycled.
- Parts are marked with the recycling logo. 
- The shields are manufactured and packaged in a clean room environment.
  - Operators in production wear hair nets, face masks and gloves.
  - Patent Pending design requirement mitigates touching of the shield other than on its edges by gloved hands during packaging.
  - Shields are packed inside a plastic bag.
- Assembles in seconds. Instructions are included and are available on our website.
  - Integrated fully adjustable ZipStrap® improves comfort and allows for simple assembly.
- Packs densely to minimize storage space and transportation costs.
  - 100 shields and straps per 19.4" x 15" x 9.6" carton.
  - 10-pack with straps also available.
- Minimal labor needed to produce shield and the only resource needed is plastic sheet thus making product virtually impervious to supply chain disruptions.
- VisiGuard® Face Shields are manufactured by VisiPak, a division of Sinclair & Rush, Inc., an ISO certified, multinational corporation located in St. Louis, MO since 1950.
