

800-949-1141

The VisiGuard Face Shield is one of the most important instruments in personal protection equipment. The features of the face shield make it a practical and economical solution.

Benefits of the VisiGuard[®] 1.0 Face Shield with FlexBand

- Revolutionary patent pending design allows the shield and strap to be used without foam or other materials that may harbor contaminants and allows for repeated sterilization.
 - Product has been evaluated to be compatible with common cleaning/sterilization chemicals including 70% Ethanol, 70% Isopropyl Alcohol, 3% Hydrogen Peroxide, 6% Bleach cleaning solutions and Lysol among others.
 - Other shields require an anti-fog coating to dissipate condensation. This coating is removed if disinfected with typical cleaning chemicals.
 - VisiGuard[®] shield can also be sterilized using EtO, Gamma irradiation, Eletron Beam or UV-C.
 - Provides more than 46% facial coverage than most competitor's shields (158 total square inches vs. 108) while allowing for full range of movement.
 - Approved for in-hospital use by major hospital system's independent Infectious Disease Control Department.
- Design is ANSI Z87.1 D3 approved for splash and droplet protection, as well as clarity, facial coverage and impact protection.
- FDA EUA 4132020 Model #12157 Approved in the fight against Covid-19
- Made from FDA Approved PET material
 - The shield is 100% recyclable.
 - PET is the most commonly recycled plastic in the world.
 - This is not the case with other shields made from other plastics or that have attachments which must be removed before shield can be recycled.
- Parts are marked with the recycling logo 
- The shields are manufactured and packaged in a clean room environment.
 - Operators in production wear hair nets, face masks and gloves.
 - Patent pending design requirement mitigates touching of the shield other than on its edges by gloved hands during packaging.
 - Parts are sealed inside a plastic bag.
- Assembles in seconds. Instructions are included and are available on our website.
- Packs densely to minimize storage space and transportation costs.
 - 100 shields and straps per 15.5" x 11.5" x 9" carton.
- Minimal labor needed to produce shield and only two parts (plastic and strap) makes product less susceptible to supply chain and/or labor disruptions.
- VisiGuard[®] Face Shields are manufactured by VisiPak, a division of Sinclair & Rush, Inc., an ISO certified, multinational corporation located in St. Louis, MO since 1950.

Patent Pending.
